Description

Ce manuel fait partie d'une série de 5 volumes très complets et détaillés destinée aux personnes souhaitant écrire un logiciel pour Macintosh 128K, 512K ou XL. Ces manuels pris ensemble forment une référence indissociable. Cette série de manuel contient :

- les instructions générales de l'interface utilisateur pour les applications sur Macintosh
- une description complète des routines disponibles pouvant être appelées par les programmes
- une description du matériel des Macintosh 128K et 512K.

Utilisation

Le volume I constitue une importante introduction au matériel, décrit les instructions générales de l'interface utilisateur et les routines pour mettre en place une interface utilisateur standard dans votre programme. Ces 3 fascicules ont appartenu à Michel Avenier, chercheur de l'Institut des sciences nucléaires (ISN) de Grenoble pour réaliser des développements de logiciels scientifiques.
