

MANUEL : INSIDE MACINTOSH VOLUME IV

FICHE N° 8238

PRÉSERVER
SAUVEGARDER
VALORISER

Période de fabrication : 1975-1999
Fabricant : fabricant non renseigné
Domaines : Informatique et Communication
Sous-domaines : Ordinateurs
Organisme : ACONIT
Ville : Grenoble (Isère)
Modèle :
Matériaux : Carton, Papier

Description

Ce manuel fait partie d'une série de 5 volumes très complets et détaillés destinée aux personnes souhaitant écrire un logiciel pour Macintosh 128K, 512K ou XL. Ces manuels pris ensemble forment une référence indissociable. Cette série de manuel contient :

- les instructions générales de l'interface utilisateur pour les applications sur Macintosh
- une description complète des routines disponibles pouvant être appelées par les programmes
- une description du matériel des Macintosh 128K et 512K.

Utilisation

Le volume IV décrit une discussion sur la hiérarchie des fichiers système, l'interface au port SCSI (Small Computer Standard Interface), l'information sur le disque entrée/sortie pour le lecteur de disque 800K et le disque dur, une description du matériel Macintosh Plus, des annexes et un glossaire fournissent des informations complémentaires. Ces 3 fascicules ont appartenu à Michel Avenier, chercheur de l'Institut des sciences nucléaires (ISN) de Grenoble pour réaliser des développements de logiciels scientifiques.

Inside Macintosh™ Volume IV

*Contains Information about Macintosh™ Plus
and Macintosh 512K enhanced computers.*

Inside Macintosh Volume IV

The Official Publication from Apple Computer, Inc.

Inside Macintosh Volume IV is a companion to the first three volumes of *Inside Macintosh* and describes the features of the Macintosh™ Plus and Macintosh 512K enhanced computers.

Written by the people at Apple Computer, *Inside Macintosh* is the definitive source of information for programmers writing application programs, desk accessories, device drivers, or any other software for the Macintosh. It includes:

- Guidelines for designing a user interface that conforms to the Macintosh standard.
- Descriptions of the more than 500 routines that are built into the Macintosh, and of more than 100 routines that are disk-based.
- A description of the Macintosh hardware.

Inside Macintosh is your guide to creating software for the Macintosh, whatever programming language you use. It describes the Pascal interfaces to the routines and, wherever applicable, gives special information for programming in assembly language. (If you're using a high-level language other than Pascal, your development system documentation should tell you how to apply the information in *Inside Macintosh*.) A typical chapter describes a related set of routines, such as the Window Manager, and provides:

- Key concepts and background information.
- Hints on which routines you need to learn about and how they fit into your program.
- A detailed description of each routine.
- Advanced techniques.

The first three volumes of *Inside Macintosh* provide all the information you'll need to write software for the entire Macintosh family. This volume, Volume IV, contains descriptions of hundreds of changes and additions to the original set of programming tools, including:

- An in-depth discussion of the Hierarchical File System.
- Details on the interface to the Small Computer Standard Interface (SCSI) port.
- Information on disk I/O for the 800K disk drive and the Hard Disk 20.
- A description of the Macintosh Plus hardware.
- Appendices and a glossary that provide additional information.

Volume I contains important introductory material, the user interface guidelines, and descriptions of the routines that help you implement the standard user interface in your program. Volume II describes the routines that perform basic tasks, such as file and device I/O, memory management, and interrupt handling. Volume III contains a discussion of your program's interface with the Macintosh Finder, a description of the Macintosh 128K and 512K hardware, and a summary of all the ROM-based and disk-based software. Appendices and a glossary provide additional useful information.

Contents

ix	Preface
xi	About Inside Macintosh Volume IV
1	1 The Macintosh User Interface Guidelines
3	About This Chapter
3	Arrow Keys
7	Reserved Command Key Combinations
7	Window Zooming
10	Standard Close Dialog
13	2 Using Assembly Language
13	The Trap Dispatch Table
13	Format of the Trap Words
15	3 The Resource Manager
15	Resource Manager Routines
17	Resource Types
18	Checking For Errors
18	ROM Resources
21	Summary of the Resource Manager
23	4 QuickDraw
23	QuickDraw Routines
26	Summary of QuickDraw
27	5 The Font Manager
29	About the Font Manager
29	Fonts and Their Families
31	Font Manager Routines
33	Communication Between QuickDraw and the Font Manager
34	Font Manager Data Structures
42	Font and Font Family Resources
45	Summary of the Font Manager
49	6 The Window Manager
50	Window Manager Routines
51	Summary of the Window Manager
53	7 The Control Manager
53	Control Manager Routines
53	The Control Definition Function
54	Summary of the Control Manager
55	8 The Menu Manager
55	Menu Manager Routines
56	The Menu Definition Procedure
56	Summary of the Menu Manager

57	9 TextEdit
57	TextEdit Routines
58	Default Click Loop Routine
58	Summary of TextEdit
59	10 The Dialog Manager
59	Dialog Manager Routines
60	Summary of the Dialog Manager
61	11 The Scrap Manager
63	12 Toolbox Utilities
63	Toolbox Utility Routines
66	Summary of the Toolbox Utilities
67	13 The Package Manager
68	Summary of the Package Manager
69	14 The Binary-Decimal Conversion Package
71	15 The Standard File Package
73	Using the Standard File Package
74	Creating Your Own Dialog Box
76	Summary of the Standard File Package
77	16 The Memory Manager
77	Memory Manager Routines
80	Error Reporting
81	Summary of the Memory Manager
83	17 The Segment Loader
85	18 The Operating System Event Manager
85	Summary of the Operating System Event Manager
87	19 The File Manager
89	About This Chapter
89	About the File Manager
96	Using the File Manager
104	Information Used by the Finder
106	High-Level File Manager Routines
115	Low-Level File Manager Routines
159	Data Organization on Volumes
174	Data Structures in Memory
182	Using an External File System
183	Summary of the File Manager
213	20 The Device Manager
215	About the Device Manager
216	The Chooser
222	Summary of the Device Manager

223	21 The Disk Driver
223	Advanced Control Calls
224	Summary of the Disk Driver
225	22 The Serial Driver
226	Advanced Control Calls
227	Summary of the Serial Driver
229	23 The AppleTalk Manager
231	24 The System Error Handler
233	25 The Operating System Utilities
233	Operating System Utility Routines
236	Summary of the Operating System Utilities
239	26 The Disk Initialization Package
241	Summary of the Disk Initialization Package
243	27 The Finder Interface
243	The Desktop File
245	28 The Macintosh Plus Hardware
245	Overview of the Hardware
247	The Video Interface
247	The Sound Generator
248	The SCC
250	The Keyboard
250	The Floppy Disk Interface
251	The Real-Time Clock
251	The SCSI Interface
254	Summary
255	29 The System Resource File
256	Initialization Resources
259	30 The List Manager Package
261	About This Chapter
261	About the List Manager Package
262	List Records
266	Cell Selection Algorithm
268	Using the List Manager Package
269	List Manager Package Routines
276	Defining Your Own Lists
278	Summary of the List Manager Package

283	31 The SCSI Manager	283
285	About This Chapter	285
285	About the SCSI Manager	285
286	Using the SCSI Manager	286
289	SCSI Manager Routines	289
292	Writing a Driver for an SCSI Block Device	292
294	Summary of the SCSI Manager	294
297	32 The Time Manager	297
299	About This Chapter	299
299	About the Time Manager	299
299	Using the Time Manager	299
300	Time Manager Routines	300
301	Summary of the Time Manager	301
303	Appendix A: Routines That May Move or Purge Memory	303
305	Appendix B: System Traps	305
309	Appendix C: Global Variables	309
311	Glossary	311
319	Index	319
